TITLE: Plasma gun for metals. Class 49, No. 190186 (announced by the Electric Welding Institute, im. Ye. O. Paton (Institut elektrosvarki)

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 1, 1967, 128

TOPIC TAGS: plasma gun, ~~low pressure plasma gun~~ metalworking machinery

ABSTRACT:

This Author Certificate introduces a plasma gun for treating metals in vacuum with a low pressure constricted arc. The gun (see Fig. 1) includes a housing, a cathode subassembly, and a nozzle, insulator, and vacuum fitting.

Card 1/3

UDC: 621.791.755.03

ACC NR: AP7004793

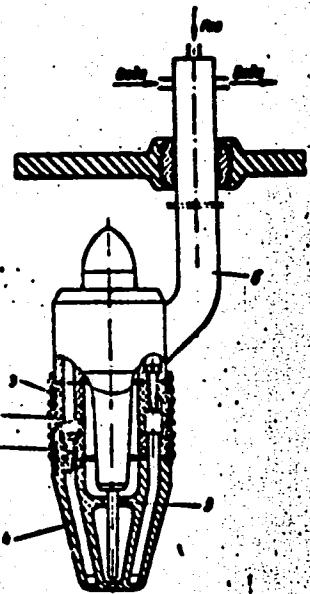

Fig. 1. Plasma gun

1 - Insulator; 2 - screen; 3 - water
coolant ducts; 4 - nozzle;
5 - screen baffle; 6 - vacuum
fitting.

Cord 2/3

ACC NR: AP7004793

To prolong the service life and simplify the operation of the gun, the insulator is equipped with an exchangeable protective screen and is water cooled. The nozzle has a baffle and an exchangeable refractory-metal insert. The vacuum fitting is mounted eccentrically to the gun body. Orig. art. has: 1 figure. [ND]

Elektricheskiye fil'try (Electric Filters) 3rd ed., rev. and enl. Kiyev, Gostekhizdat USSR, 1959. 616 p. Errata slip inserted. 3,500 copies printed.

Ed.: O. Bondarenko; Tech. Ed.: P. Patsalyuk.

PURPOSE: This book is approved by the Ministry of Higher Education, Ukrainian SSR, as a textbook for students in radio engineering and electrical engineering schools of higher education in the Ukrainian SSR. This book may also be used by technical personnel in wire and radio communications, and by technical personnel in other fields of engineering who in their work have to deal with equipment in which filters are used.

COVERAGE: This textbook presents principles of theory and design of electrical (frequency) filters. The textbook begins with basic information on two-and four-terminal networks, and then proceeds to a detailed study of filters used in wire and radio communication systems. No personalities are mentioned. There are 122 references: 113 Soviet, 3 English, 1 French, and 5 German.

TITLE: Determination of the temperature field and the maximum heat flux around the cooling perimeter in channels with straight longitudinal fins

SOURCE: Teplofizika vysokikh temperatur, v. 4, no. 2, 1966, 250-254

TOPIC TAGS: temperature distribution, heat flux, conductive heat transfer

ABSTRACT: With a decrease in the heat conductivity coefficient of the material of the wall, other conditions being equal, the zone of effect of the fins on heat transfer through smooth walls becomes smaller. It was found that a further decrease in the heat conductivity of the wall leads to complete elimination of this effect and that, finally, it begins to exert an unfavorable effect on heat transfer. The article is illustrated with figures showing the effect of the geometry of the fins and their spacing, etc. on heat transfer. These conclusions are reached on a theoretical basis; the article contains no actual experimental data. Orig. art. has: 12 formulas, 3 figures and 1 table.

Method for the numerical determination of eigenvalues (e. g. natural frequencies) and eigenvectors (e. g. modes of vibration) with special regard to technical eigenvalue problems. (In German) A. Bozzani, Periodica Polytechnica, Engineering, Vol. 8, 1959, No. 3, pp. 205-221, 12 figs., 1 tab.

A method suitable for the solution of eigenvalue problems investigated by a discrete model, is described. The method can be applied directly to the so-called chain-type, smooth oscillating system model, yet when preceded by the Falk finite iteration process its field of application may be extended to models satisfying generalized conditions as well. Essentially the method consists of the combination of two methods, that of P. Kohn and that of Beronar, which as yet have not been correlated in literature. Although some trial and error is involved in the method, the residual error can be traced through any step in the process. The possibility of a simple check is also pointed out. The method can be

carried out both graphically and analytically, however when using the latter process it is advisable to follow up by a free hand sketch of the graphical alternative. A tabulated form to facilitate computation work is also given. The method described can be carried out by a semi-automatically controlled or fully automatic mechanism, or by an electric circuit consisting exclusively of ohmic resistances. The mechanism and the electric circuit serving the above purpose are also described.

TITLE: Changes in the antitoxin titer of animals used for serum production in the course of iodocasein feeding

SOURCE: Kiserletes Orvostudomany, v. 17, no. 2, 1965, 153-159

TOPIC TAGS: experiment animal, biochemistry, veterinary medicine, animal physiology, immunization, immunology

ABSTRACT: The changes in the antitoxin titer were studied in animals the metabolism of which has been increased by iodocasein feeding. Among horses immunized with diphtheria and tetanus toxin and sheep immunized with staphylotoxin, the antitoxin level of the groups fed on iodocasein was significantly higher than that of the controls. No noticeable difference was observed in cattle immunized with tetanus toxin. Orig. art. has: 1 figure and 5 tables. [JPRS]

SOURCE: Academia scientiarum hungaricae. Acta microbiologia, v. 12, no. 2, 1965,
157-161

TOPIC TAGS: gamma globulin, enzyme, biochemistry, blood

ABSTRACT: The antistreptokinase titer of 400 healthy blood donors was examined using a modified method worked out by the author. A gamma globulin preparation, used as the Hungarian antistreptolysin-O (ASO) substandard, was regarded as containing equivalent amounts of antistreptokinase (ASK) and ASO units and was used for comparison. In 96.25 per cent of the cases, the distribution of titers was according to the rules of normal distribution; in 3.75 per cent, the titers were lower than expected. The average titer of the sera examined was 115.6 units. Titers exceeding 286 units were considered as pathological. The mean titers decreased with increasing age of the persons tested. The average ASK of the entire subject material as well as the ASK averages for different age groups were in good agreement with the average ASO titer determined in other blood donors.

hospitalized childrenSOURCE: Academia scientiarum hungaricae. Acta microbiologia, v. 12, no. 2, 1965,
163-171

TOPIC TAGS: enzyme, biochemistry, blood

ABSTRACT: The ASO and ASK titers have been studied in 500 hospitalized children. It was concluded that, of the two reactions, ASK is a somewhat more specific indicator of streptococcal infection. Simultaneous determination of the two titers is advisable since a streptococcal etiology was indicated by only one of the reactions in 26 per cent of the cases. ASK titers appeared to extend over a wider range than did ASO titers. With the method employed in the present study, the border values between normal and pathological titers were in the range of 240-280 units for both reactions. The authors thank Mrs. L. Heiterer, Mrs. J. Arendas, and Miss O. Forinda for skilled technical assistance. Orig. art. has: 9 tables.

1958, 11/6 (130-134) Graphs 5

The greatest difficulty in assessing the frequency of relapse in pulmonary tb is the

2414

confusion caused by including in reviews 'pseudo-relapses' arising out of diagnostic difficulties. In one survey of 240 relapses the 'pseudo-relapses' amounted to 79.1%. In the author's series a relapse rate of 40.4% was found amongst patients with cavitating disease, treated mostly by collapse therapy. The initial severity and extent of the disease appears to have no relation to the frequency of collapse. Nor was there any connection between the method of treatment and relapse and the prognosis was not improved by additional surgical measures after satisfactory chemotherapy.

"The Importance of Control Groups in Clinical Mass Examinations."

Budapest, Orvosi Hetilap, Vol 104, No 15, 14 Apr 63, pages 673-683.

Abstract: The authors discuss the importance and requirements of blind and double-blind tests of drugs. Controlled experiments conducted in Tb institutes with INH+STM, INH+STM+PAS, INH+PAS, INH+TbI are discussed at length and the results are tabulated with reference to age, duration of the disease, pathological form of the disease and in terms of the whole participating group. The authors stress that controlled mass tests are the only reliable scientific method for the evaluation of new drugs. 7 Eastern European, 9 Western references.
